## 2.6.2 Attainment of programme outcomes and course outcomes are evaluate by the instiutution

The attainment of program oputcomes (pos) and (Cos ) are expected to be acquired by the student on the completion of specific course or programmes. According to be Bloom's Taxonomy Pos and Cos are obtained through Knowledge ,application, analyasis ,and Evaluation.In the present scenario, Bloom's taxonomy in which direct method (80%) and indirect method (20%) is followed for mapping Pos and Cos.

**Direct method** – In this method student's knowledge and performance in the internal test ,assignment seminar and stidies , NET /SET qualified students are considered. This will provide strong evidence of student's learning.

**Indirect method** – In this method course exit survey ,examiner feedback Placement Progression to higher studies NET /SET qualified students are considered .This will provide strong of student's Knowledge.

For example , co Attainment : In the Direct tools ,80/%i which internal tools 15%, co-curricular activities 15%, semester and examination 50% and examination 50% and in direct tools 20% in which placement 10% Progression of higher studies 5% NET /SET qualified 5% The above calculation are done at the final semester.

Level o ----- 35% Not attained ----- Correlation

Level 1 -----35% -----50% achieved ----- Low correlation

Level 3 -----50%-----60% achieved -----Medium Correlation

Level , Above 60% achieved -----High correlation

The course mapping is done on the basis of internal and external assessment varied modes of assessment are used by the faculty as per the applicability .The final course outcomes is mapped by making correlation between attainment through external examination and internal examinations.
